

Industry Applications & Case Studies

Pervious paving has many applications: parking lots, driveways, sidewalks and public access paths, low volume streets, golf paths, retaining walls, French drains, and slope protection. Pervious paving can applications across industry segments, and the specific benefits of pervious is best illustrated through our client work:

Cities and Municipalities

City of Austin, Texas 2006

Evolution helped the City of Austin pave 15 miles of public access paths through Shoal Creek Park. We trained staff from the City's maintenance department on how to use pervious concrete and our unique paving machine. The project was a huge success: the City was able to pave 1350 lineal feet of an 8' wide trail with pervious concrete in under eight hours on their first try.
